

2. CATALOGUE

Arrangement of the catalogue

The catalogue is arranged on the same principles as SNS Paris-Berlin-Vienna.¹¹⁹ The Sasanian coins are listed by king, mint, and type. The Arab-Sasanian issues are arranged first by mint, then by the names occurring on the coins, then by type and finally by year. This arrangement is intended to facilitate the observation of style. Nonetheless, in modern publications of Islamic coins, it is geographical criteria that are considered to be of primary importance, the best example of this being SNA Tübingen.¹²⁰ As with SNS Paris-Berlin-Vienna, however, the mint signatures are arranged according to the Latin alphabet, and not by administrative or geographical unit. The main criterion here is typology. The type references are that of SNS where available, otherwise SN for the Sasanian coins. For the Arab-Sasanian, Tabaristan and Bukhara issues, an outline of the typological layout has been given here which is, however, intended only for use in this study and not as a general typological treatment. These typological outlines precede the respective parts of the catalogue to make the basic typological patterns more easily comprehensible. In the case of the Sasanian coins, the description of each type is given before the listings of the respective ruler. The legends as well as the additional marks are covered in separate sections of their own since they are too lengthy and would, if incorporated in the catalogue, break the sylloge pagination. The numbering of the countermarks follows Walker 1941.

The catalogue entries are arranged as follows: the first line gives catalogue number, metal, denomination, weight (in grams), diameter (in millimetres), die axis (according to the clock) and, where necessary, technical observations. In the second line, the respective collection and inventory number is listed, while in lines three and four obverse and reverse legends are provided, in some cases together with additional marks and – in the case of the reverse – the date. In the case of Arab-Sasanian coins I have noted which chronological system – AH, YE or PYE – has been used.

To make the catalogue more easily accessible, I have collected personal names on the coins and the mint signatures in indices (3.2., 3.3.).

¹²² Göbl 1971, tab. 11 distinguishes obverse types I and II by the absence or presence of the word *'pzwyn* to the left of the bust, i.e., by the use of *obv-legend 17* or *18* according to the numbering in the present catalogue. This is not employed here as a criterion for distinguishing coin types, although for the sake of uniformity, Göbl's numbering system is used.

LEGENDS

Legends are arranged in chronological order for Sasanian coins. In the case of Arab-Sasanian and Tabaristan issues, the criterion is first which languages are used (Pehlevi, Arabic and Pehlevi...). The order within the various groups is alphabetical; for the sake of easy arrangement, ' is equated with Latin "A".

APPENDIX 1:
A HOARD OF LATE SASANIAN COPPER COINS
IN THE ERETZ ISRAEL MUSEUM

The catalogue follows the patterns of the sylloge. The coins are arranged by kings in chronological order, then by mints, then by decreasing weight. The majority of the irregular Khusro II issues is arranged by decreasing weight only without regard to the various stages of typological and artistic degeneration. The typological references can be found in the sylloge.

Each single coin is listed. The first line gives the catalogue number; coins which are depicted are marked *. This is followed by the metal – AE – without denominational standard, weight (in grams), diameter (in millimetres), die axis (according to the clock) and, if necessary, technical observations. In the second line, the inventory number in the Eretz Israel Museum is listed. If necessary, further information is provided in a third line. For die links see the text (*Appendix I*).
