

59 (p. 177)

The Valley of the Yellow River looking up stream, south-east from a bluff above Ta-ralung, between Hao-wa and Sa-khu-tu valleys, elevation 10600 feet. The valley walls to the right are forested with *Picea asperata* Mast. The wrinkled appearance of the slopes to the left is due to overgrazing.

60 (p. 177)

The Yellow River looking south, up stream, from a bluff above Sa-khu-tu ravine, elevation 10910 feet. Juniper trees in center below, in the mouth of Sa-khu-tu ravine. The narrow ridges on the left hillsides are the result of grazing by the herds of sheep of the nomads.
