APPENDIX

LISTS OF FINDS*

by *Veronica Hinterhuber*

1. General Remarks

Over the course of the AcrossBorders 2013–2017 campaigns in SAV1 West and SAV1 East more than 6300 find numbers, often containing several items, were assigned.

The following lists of finds illustrate the rich material discovered in the years 2013–2017. The items are presented in tables which are firstly arranged according to the two excavation areas SAV1 West and SAV1 East and the years of the discovery.

Within this framework, the internal structure of each table consists of the arrangement of the respective finds with their find numbers after their specific location and according to their SU or level numbers. The numbering system of the corpus is based on the find number and the year of discovery. For this system, a clear separation between numbers from SAV1 East and SAV1 West was introduced in 2014, when work started to be conducted at both sectors simultaneously as illustrated in the Table below:

Year	Sector	Numbers
2014	SAV1 East	1–499, 1500–1522, 2000–2425
2014	SAV1 West	500–1378
2015	SAV1 East	1000–1684
2015	SAV1 West	1–851
2016	SAV1 East	1–512
2016	SAV1 West	1000–1503
2017	SAV1 East	500–955
2017	SAV1 West	1–476

Numbering system of finds according to sectors

Subsequently, the items were specified alphabetically in the tables according to their various genres such as, e.g., beads, bones, charcoal, faience, pottery or stone tools, with further details concerning amount or material. In case of objects deriving from disturbed contents, fills or sieved material, this column may contain various different object types. Furthermore, the respective quantities in the categories, such as, e.g., textiles, bones, charcoal and leather etc. are not or only partially indicated by additional information like “bag” or “basket”. Further data includes the exact date of the discovery.

Finds provided with an additional label “SAV1W” or “SAV1E” and a continuous number dependent on the excavation’s chronology are disclosed und fully registered in the AcrossBorders project’s database (see Chapter 4.3). At present, a total of 4883 objects have been recorded in this database, including additional data such as detailed descriptions, indication of dimensions, of color tones after Munsell, and photographs.

* Based on the original find lists created in the field from 2013 to 2017.
